

MOBILE "TURTLE"

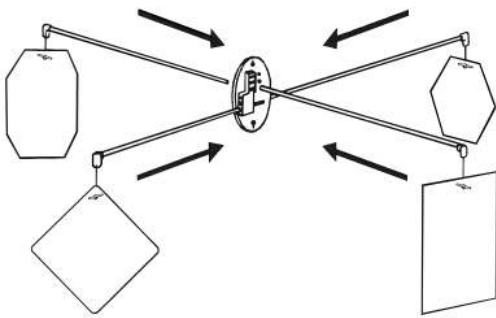

step 1

Twist off the end-caps from the central oval. Insert the end of a wire mobile arm into the end-cap, as shown. Repeat for each mobile arm, using one end cap per arm and completing four arms.

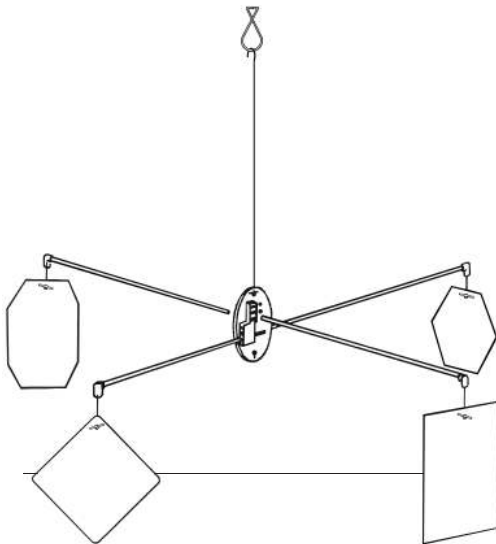

step 2

Connect mobile panels to the end-caps using barbed-string, as shown. Pull the string down into the end-cap's slot to secure. Repeat for each mobile arm.

step 3

Push the mobile arms through the matching holes in the oval center, as shown. Repeat for each mobile arm. Adjust the mobile arms by pushing or pulling them through the oval center for perfect balance.

step 4

Hang the completed mobile using barbed string, jetwires, wire hooks or other suitable hanging options.

Create a ceiling hanging-point by using the figure-8 clip (shown), the squeeze clip with string, the c-hook with string or other suitable pieces of hardware.
